Section III. Summary of Company Business

I. Main businesses of the Company in the reporting period

The company is specialized in power and thermal supply, as well as providing technical consulting and technical services for power plant (stations). At beginning of the period, the company has three wholly-owned or holding gas turbine plants, which are all located in the power load center of Pearl River Delta area. In reporting period, the 70% equity of Shen Nan Dian Dongguan Company, directly or indirectly hold by the Company are transfer to Shenzhen Gas by agreement. Therefore, up to the reporting period-end, the company has two wholly-owned or holding gas turbine plants, which equipped with five sets of 9E gas steam combine cycle power generating units, with total installed capacity to 900000 KW (Nanshan Power Factory: 3×180000 KW, Zhongshan Nanlang Power Plant: 2×180000 KW). During the reporting period, the Company mainly engaged in the combined cycle power generation business with gas-steam, the subordinate Nanshan Power Factory and Zhongshan Nanlang Power Plant are operates in a normal station. From January to June 2020, the company withstood the pressure of the rapid shrinking of the electricity demand of the whole society caused by the novel coronavirus pneumonia epidemic, and completed the full power scale (on-grid power + electricity marketing power) of 893 million KWH(data of Shen Nan Dian Dongguan Company is not included), completing the actual on-grid power of 333 million KWH and the electricity marketing power of 560 million KWH. Completion of the electricity for subordinate power plants are as: Nanshan Power Factory (New Power Company included) completed 272 million KWH of on-grid electricity, the full electricity quantity totaled 466 billion KWH, with a year-on-year down of 7.72%; Zhongshan Nanlang Power Plant completed 61 million KWH of on-grid electricity, the full electricity quantity totaled 427 million KWH, with a year-on-year growth of 18.61%.

During the reporting period, the company not only strive to improve the operating efficiency of its main business of electric power, but also made great efforts to the operation and expansion of related businesses. In response to the impact of the epidemic, the subordinate Shen Nan Dian Engineering Company changed its thinking pattern in a timely manner, adjusted its business strategy, and strived to turn crises into opportunities. While continuing to manage existing overseas projects, it rapidly increased investment in the domestic technical service markets and actively explored the technical consulting and technical service business for gas turbine power station construction projects in domestic and foreign markets; Shen Nan Dian Environment Protection Company took the initiative, actively communicated, made every effort to ensure the stable operation of the sludge treatment production line, and earnestly performed environmental protection responsibilities. In the first half of the year, a total of 64,300 tons of sludge were processed, and realized sludge reduction, harmless treatment and comprehensive utilization of resources.

II. Major changes in main assets

1. Major changes in main assets

Major assets	Note of major changes
Equity assets	No major changes
Fixed assets	During the reporting period, 70% equity of Shen Nan Dian Dongguan Company are sold out by the Company, and at end of period, Shen Nan Dian Dongguan Company excluded in consolidate scope, thus the fixed assets have 30.88% declined over that of

	year-beginning
Intangible assets	During the reporting period, 70% equity of Shen Nan Dian Dongguan Company are sold out by the Company, and at end of period, Shen Nan Dian Dongguan Company excluded in consolidate scope, thus the intangible assets have 51.07% declined over that of year-beginning
Construction in process	During the reporting period, 70% equity of Shen Nan Dian Dongguan Company are sold out by the Company, and at end of period, Shen Nan Dian Dongguan Company excluded in consolidate scope, thus the construction in process have 8.49% declined over that of year-beginning
Monetary fund	During the reporting period, 70% equity of Shen Nan Dian Dongguan Company are sold out by the Company, received equity transfer amount and borrowing refund, thus the monetary fund has 40.31% up over that of year-beginning
Inventory	During the reporting period, 70% equity of Shen Nan Dian Dongguan Company are sold out by the Company, and at end of period, Shen Nan Dian Dongguan Company excluded in consolidate scope, thus the inventories have 12.94% declined over that of year-beginning

2. Main overseas assets

☐ Applicable ☒ Not applicable

III. Core Competitiveness Analysis

In recent years, due to the impact of the macroeconomic situation and the common problems of gas turbine industry, the Company's main business has been facing increasing difficulties and challenges. However, the basic core competitiveness formed by 30 years of operation and development, the strong support of the company's major shareholders, and the operating and management innovation of the company's new board of directors and leadership team have laid the essential foundation for the company's sustainable survival and for seeking transformation and development. (core competitiveness analysis found more in the Annual Report 2019)

Section IV. Discussion and Analysis of the Operation

I. Introduction

In the first half of 2020, the sudden outbreak of novel coronavirus pneumonia brought an unprecedentedly huge impact on China and the global economy. Affected by the novel coronavirus pneumonia epidemic, the demand for power in the whole society has shrunk sharply. According to statistics from relevant departments, from January to June, the province's total electricity consumption was 296.484 billion kWh, a year-on-year decrease of 2.07%.

Facing the dual test of the epidemic and the industry situation, the company withstood the pressure, forged ahead against the trend, strictly implemented the overall deployment and requirements of the Central Committee of the Communist Party of China, the State Council, provincial, municipal, and district governments and higher-level units to respond to the epidemic, and earnestly implemented epidemic prevention and control work, while overcoming difficulties to do a good job in production and operation management, and go all out to minimize the negative impact of the epidemic on the company. After the full resumption of work and production, the company intensified its efforts to take serious measures to safe production, stock operation and transformation development. On the premise of ensuring safety and epidemic prevention and control, the company has achieved good results in production, operation, and management.

The first was industrial coordination and strategic cooperation for common development. The company negotiated and transferred the 70% equity of Shen Nan Dian Dongguan Company it held directly and indirectly to Shenzhen Gas and signed the Resource Strategic Cooperation Agreement to give full play to the advantages of the two parties in terms of resources, technology, market and facilities to achieve resource complementarity, enhance the overall competitiveness of both parties in their respective fields, and create conditions for the company to reduce burdens, increase efficiency and generate income, and seek transformation and development. The second was one factory one policy, and scientific marketing created good results. In the face of the difficult production situation that the demand for electricity in the society continued to be insufficient from February to April this year, on the one hand, the company paid close attention to improving the efficiency and reducing consumption of power generation equipment, and on the other hand, it adopted marketing measures such as market-based competition calculation models and "one factory one policy" marketing strategy, strived to seize market opportunities, and actively strived for more economic electricity share. At the same time, through strategic cooperation and healthy competition, strived to minimize the cost of natural gas procurement. The third was capital-driven, rejected the dross and assimilated the essence to seek transformation. Guided by the annual working ideas of actively exploring advanced manufacturing, life and health, new-generation information technology, technology and finance and other high-end manufacturing industry and innovative industry project resources and business fields, on the one hand, relying on the platform advantages of major shareholders, it's planned to participate in the investment of Yuanzhi Ruixin New Generation Information Technology Equity Investment Fund as a limited partner. On the other hand, extensively sought opportunities for high-quality projects and explored effective paths for transformation and development. The fourth was stability and long-term development, guaranteed long-term security to promote development. While doing a good job in fighting the novel coronavirus pneumonia epidemic, the company strived to lay a solid foundation for safe production, established and completed a series of safety index management and production guarantee systems, and further strengthened risk classification control and hidden danger investigation and treatment. As of the end of this reporting period, the company has achieved a total of 5,895 days of safe production, creating a new situation with the best safety record in the company's history, the epidemic prevention and control work has also achieved phased results.

During the reporting period, the Company has achieved a revenue in operation of 5181.5 million Yuan, the net profit attributable to shareholders of the listed company amounted as 52.04 million Yuan and basic EPS was 0.09 Yuan.

Estimation on accumulative net profit from the beginning of the year to the end of next report period to be loss probably or the warning of its material change compared with the corresponding period of the last year and explanation on reason

☐ Applicable ☒ Not applicable

X. Risks and countermeasures

1. In terms of main business, although the company has accumulated certain experience through vigorously focusing on power market marketing, due to the high cost of power generation by 9E gas turbines, the on-grid power price is at a high level among all types of power generation units. With the increasingly fierce competition in power trading market, coupled with the upcoming implementation of the power spot trading policy, the company's main business of gas turbine power generation will face greater challenges. The company will actively communicate with relevant provincial and municipal departments to reflect the difficulties of the enterprise and seek government support, and will try its utmost to improve the profitability of the main business and the overall operating efficiency by strengthening the management of existing assets. At the same time, the company will actively explore diversified business models and transformation and development opportunities to create better conditions for the company's sustainable operation and healthy development.

2. In terms of safety production, the power generation equipment of the company's power plants all have different degrees of aging, and the hidden troubles and safety risks are increasing year by year, which put forward higher requirements for equipment management and maintenance investment. In addition, the age structure of the company's technical personnel is aging and the problem of temporary shortages is also becoming increasingly apparent, making the company's safety management face greater challenges. The company will strengthen the regular inspection and maintenance of equipment, strengthen the safety education and training of employees, intensify the responsibility system for safety production, and strictly implement the safety management system, and enhance the safety awareness and responsibility awareness of personnel at all levels by combining assessment and rewards and punishments to ensure production safety.

3. In terms of fuel procurement, on the one hand, the uncertainty of the actual power generation will further increase the possible difference between the planned purchase of natural gas and the actual purchase, resulting in difficulty in the execution of the contract volume or a shortage of natural gas supply due to an expected shortage; on the other hand, in the first half of the year, natural gas prices were at a low level due to factors such as the epidemic and disputes among oil-producing countries, however, with the recovery of international crude oil prices, natural gas prices have shown an upward trend in the second half of 2020, and the company will face pressure from a sharp increase in fuel costs. The company will continue to leverage its advantages in large-scale procurement and the adjustment function of multiple gas sources, while ensuring to meet the demand for electricity production, it

will try its best to reduce the cost of natural gas procurement.

The Company reminds investors to pay attention to the above major risks and other risks that the Company may face, and prudently make rational investment decisions.

Section V. Important Events

I. In the report period, the Company held annual shareholders' general meeting and extraordinary shareholders' general meeting

1. Shareholders' General Meeting in the report period

Session of meeting	Type	Ratio of investor participation	Opening date	Date of disclosure	Index of disclosure

2. Fulfill the precise social responsibility for poverty alleviation

During the reporting period, the company has not yet carried out targeted poverty alleviation.

XVII. Other major events

√Applicable □ Not applicable

1. Matters related to the agreement to transfer 70% of the shares of Shen Nan Dian Dongguan Company. On March 5 and March 23, 2020, the Eleventh Extraordinary Meeting of the Company's Eighth Board of Directors and the 2020 First Extraordinary General Meeting of Shareholders respectively reviewed and approved the Proposal on the Agreement to Transfer 70% Equity of Shen Nan Dian (Dongguan) Weimei Electric Power Co., Ltd.", agreeing to transfer 70% equity of Shen Nan Dian Dongguan Company directly and indirectly held by the company to Shenzhen Gas at a total price of 104.98 million yuan (including the equity agreement price of 87.5 million yuan and the transition period gains and losses of 17.48 million yuan). According to the equity transfer agreement

signed between the company and Shenzhen Gas, after the company received 40% of equity transfer fund, i.e. 59.99 million yuan, of Shen Nan Dian Dongguan Company from Shenzhen Gas, Shen Nan Dian Dongguan Company has completed the industrial and commercial change registration on April 9, 2020. Since then, the total loan of 300 million yuan applied by Shen Nan Dian Dongguan Company from Ningbo Bank Shenzhen Branch and Industrial Bank Shenzhen Branch has been repaid, and the joint guarantee and liability guarantee provided by the company for the above loan of Shen Nan Dian Dongguan Company has been lifted; Shen Nan Dian Dongguan Company has fully repaid the principal and interest of the company's 180 million yuan of financial assistance. On July 2, 2020, the company's wholly-owned subsidiary Hong Kong Syndisome Co., Ltd. received the remaining 30% equity transfer payment of RMB 44.99 million from Shenzhen Gas. So far, the company has received all the equity transfer payments paid by Shenzhen Gas, and the transfer of 70% equity of Shen Nan Dian Dongguan Company was completed. (Found more in the Notice released on *China Securities Journal*, *Securities Times*, *Hong Kong Commercial Daily* and Juchao Website, including 70% Equity of Shen Nan Dian (Dongguan) Weimei Electric Power Co., Ltd Transfer, Resolution of the First Extraordinary Shareholders General Meeting of 2020, Progress of Transfer of 70% Equity of Shen Nan Dian (Dongguan) Weimei Electric Power Co., Ltd and Completion of the 70% Equity of Shen Nan Dian (Dongguan) Weimei Electric Power Co., Ltd Transferred (Notice No.: 2020-006, 2020-019, 2020-023 and 2020-032))

2. Matters concerning the company's investment in Yuanzhi Ruixin New Generation Information Technology Equity Investment Fund. On March 5, 2020 and March 23, 2020, the Eleventh Extraordinary Meeting of the Company's Eighth Board of Directors, and the 2020 First Extraordinary General Meeting of Shareholders respectively reviewed and approved the Proposal on *Investing in Yuanzhi Ruixin New Generation Information Technology Equity Investment Fund and Related Transactions*, agreed that the company would invest 200 million yuan with its own funds in Yuanzhi Ruixin New Generation Information Technology Equity Investment Fund. In view of the fact that Shenzhen Capital Holdings Co., Ltd, one of the limited partners of the fund, and Shenzhen Yuanzhi Ruixin Equity Investment Management Co.,Ltd., the general partner of the fund, are all related legal persons of the company, the company fulfills relevant approval procedures and information disclosure obligations in accordance with relevant regulations of related transactions. As of the end of the reporting period, the related work is in progress. The company and related parties have neither signed the Partnership Agreement for Yuanzhi Ruixin New Generation Information Technology Equity Investment Fund nor invested funds. The company will follow the progress of the matter and fulfill information disclosure obligations in accordance with the law and regulations. (Found more in the Notice released on *China Securities Journal*, *Securities Times*, *Hong Kong Commercial Daily* and Juchao Website, including *Notice on Investing in Yuanzhi Ruixin New Generation Information Technology Equity Investment Fund and Related Transactions* and Resolution of the First Extraordinary Shareholders General Meeting of 2020 (Notice No.: 2020-007 and 2020-019))

3. T102-0011, T102-0155 Land related matters

(1) On April 2, 2020, the company received the Notice of Shenzhen Qianhai Authority Regarding Resumption of Land Use Rights of T102-0011 Parcel from Shenzhen Qianhai Authority. The company fulfilled its information disclosure obligations in a timely manner, and immediately worked with special legal advisors to study the Shenzhen Qianhai Authority's plan to take back the land use rights of the T102-0011 parcel and its countermeasures. At the same time, it organized Shen Nan Dian Environment Protection Company, the company's wholly-owned subsidiary, and Nanshan Power Factory, a subsidiary of the company, carefully assessed the impact of this matter on their normal production and operation. On April 24, the company delivered the "Reply to the Notice of Shenzhen Qianhai Authority Regarding the Resumption of Land Use Rights of T102-0011 Parcel" (SNDHZ [2020] No. 4), which analyzed and calculated the impact of Shenzhen Qianhai Authority's plan to recover the land use rights of 2531 square meters within T102-0011 parcel on Shen Nan Dian Environment Protection Company and Nanshan Power Factory, and made a compensation request for the resumption of land use rights. (For details, please refer to the company's Announcement About Receipt of the Notice of Shenzhen Qianhai Authority Regarding Resumption of Land Use Rights of T102-0011 Parcel, the Announcement About Reply to the Notice of Shenzhen Qianhai Authority Regarding the Resumption of Land Use Rights of T102-0011 Parcel disclosed on China

Securities Journal, Securities Times, Hong Kong Commercial Daily and cninfo, Announcement No.: 2020-020, 2020-029).

(2) On April 10, 2020, the company received the Letter of Notice Regarding the Selection of the Surveying, Mapping and Evaluation Agency for the Land Preparation Project (Legal Buildings and Structures) of the Rapid Reconstruction Project of Yueliangwan Avenue from Shenzhen Qianhai Development Investment Holding Co., Ltd. The company fulfilled its obligation of information disclosure in a timely manner (for details, please refer to the company's Announcement About Receipt of Letter of Notice Regarding the Selection of the Surveying, Mapping and Evaluation Agency for the Land Preparation Project (Legal Buildings and Structures) of the Rapid Reconstruction Project of Yueliangwan Avenue from Shenzhen Qianhai Development Investment Holding Co., Ltd. disclosed on China Securities Journal, Securities Times, Hong Kong Commercial Daily and cninfo, Announcement No.: 2020-024).

(3) On June 19, 2020, Shenzhen Qianhai Authority issued the Announcement of Shenzhen Qianhai Authority on the Public Presentation of the Development Unit Planning Revision (Draft) of Qianhai Area on its official website (hereinafter referred to as "the Announcement"), and publicly presented the development unit planning revision (draft) for the three areas of Qianhai (Guiwan, Qianwan and Mawan). The company fulfilled its obligation of information disclosure in a timely manner, and submitted the Opinions of Shenzhen Nanshan Power Co., Ltd. on the Development Unit Planning Revision (Draft) of Qianhai Area to the Shenzhen Qianhai Authority, put forward relevant issues concerning planning content of the company's Nanshan Power Factory (Development Unit 13) in the Announcement, and raised an objection to the planning for Development Unit 13, hoping that Shenzhen Qianhai Authority will fully consider the contributions the company made to Shenzhen and Qianhai area for more than 30 years, based on the principle of "respect for history, cooperation and win-win", taking the successful land preparation model and mature experience of Qianhai for example, and properly solve the related issues of the company's Nanshan Power Factory (Development Unit 13), so that the legitimate rights and interests of listed companies and their shareholders shall be effectively protected (Found more in the Notice released on *China Securities Journal*, *Securities Times*, *Hong Kong Commercial Daily* and Juchao Website, including the *Notice on Shenzhen Qianhai Authority issued the Announcement of Shenzhen Qianhai Authority on the Public Presentation of the Development Unit Planning Revision (Draft)* and *Development Unit Planning Revision (Draft) of Qianhai Area to the Shenzhen Qianhai Authority* (Notice No.: 2020-031 and 2020-034))

The company will continue to follow up the progress of matters related to the land where Nanshan Power Factory is located, maintain close communication with relevant functional departments in Shenzhen and Shenzhen Qianhai Authority, and do its best to protect the legitimate rights and interests of the listed company and all shareholders.

Except for the above matters, the collection of refundable money of the "Guangdong Xinjiang Aid Project" and the "Project Technical Reform Benefit Fund" that the company participated in in 2013 had no progress or change during the reporting period.

(5) Accounting treatment on enterprise combine under the same control and under the different control

Enterprise combination under the same control: The assets and liabilities obtained by the Company in enterprise combination are measured at the book value of the consolidated financial statements of the ultimate controlling party in accordance with the assets and liabilities of the combined party on the date of combination. The difference between the carrying amount of the net assets obtained and the carrying amount of the consideration paid for the combination (or the aggregate nominal value of shares issued as consideration) is charged to the share capital premium in capital reserve. If the share capital premium in capital reserve is not sufficient to absorb the difference, any excess shall be adjusted against retained earnings.

Enterprise combinations not under the same control: The Company's assets paid and liabilities incurred or assumed on the date of purchase as a consideration of enterprise combination are measured at fair value, and the difference between the fair value and its book value is included in the current profit and loss. Where the cost of a business combination exceeds the acquirer's interest in the fair value of the acquiree's identifiable net assets, the difference is recognized as goodwill; where the cost of a business combination less than the acquirer's interest in the fair value of the acquiree's identifiable net assets, reckoned into current gains/losses after double-check.

The intermediary fees, such as auditing, legal services, consultation and other directly relevant incurred in the merger of enterprises shall be reckon into the current gains/losses when incurred; the transaction costs of issuing equity securities for the purpose of enterprise combination should be charge-off.

(6) Preparation methods for consolidated statement

1.Consolidate scope

Scope of the consolidate financial statement is determined on a control basis, all subsidiaries (including the part of the enterprise under control of the investee that can be divided) are included in the consolidated financial statement.

2. Consolidate procedures

Based on the financial statements of itself and its subsidiaries, the Company compiles the consolidated financial statements in line with other relevant information. The Company compiles consolidated financial statements, considers the entire enterprise group as an accounting entity, and reflects the overall financial position, operating results and cash flow of the enterprise group in accordance with the relevant accounting standards' recognition, measurement and presentation requirements and in accordance with unified accounting policies.

The accounting policies and accounting periods adopted by all subsidiaries included in the consolidation scope of the consolidated financial statements are consistent with the Company. If the accounting policies and accounting periods adopted by the subsidiaries are inconsistent with the Company, when preparing the consolidated financial statements, make necessary adjustments according to the accounting policies and accounting periods of the Company. For a subsidiary acquired through a business combination not under the same control, its financial statements are adjusted based on the fair value of the identifiable net assets at the acquisition date. For a subsidiary acquired through a business combination under the same control, its financial statements are adjusted based on the book value of its assets and liabilities (including the goodwill formed by the ultimate controlling party's acquisition of the subsidiary) in the ultimate controlling party's financial statements.

The subsidiary's owner's equity, current net profit or loss and the share of current comprehensive income belonging to minority shareholders are separately listed under the owner's equity item in the consolidated balance sheet, under the net profit item in the consolidated income statement and under the total comprehensive income item. If the current loss shared by the minority shareholders of a subsidiary exceeds the minority shareholder' share in the owner's equity of the subsidiary at the beginning of the period, the balance shall offset against the minority shareholders' equity.

(1) Increase subsidiaries or businesses

During the reporting period, if a subsidiary or business is added due to a business combination under the same control, adjust the opening balance of the consolidated balance sheet; incorporate the income, expenses, and profits of the subsidiary or business combination from the beginning of the current period to the end of the reporting period into the consolidated income statement; incorporate the cash flows of the subsidiary or business combination from the beginning of the current period to the end of the reporting period into the consolidated cash flow statement, and adjust the relevant items of the comparative statement as if the consolidated reporting entity had been existing since the time when the ultimate controlling party began controlling.

Where it is possible to exercise control over an investee under the same control due to additional investment, all parties participating in the combination are deemed to have adjusted in their current state when the ultimate controlling party commenced control. The equity investment held before the control of the combined party is obtained, the relevant profit or loss and other comprehensive income that have been confirmed between the date of acquisition of the original equity and the date on which the combining party and the combined party are under the same control until the combining date, as well as other changes in net assets respectively write down the retained

earnings at the beginning of period or the current profits and losses in the comparative statements.

During the reporting period, if a subsidiary or business is added due to a business combination not under the same control, the opening balance of the consolidated balance sheet period will not be adjusted; the income, expenses, and profits of the subsidiary or business from the acquisition date to the end of the reporting period will be included in the consolidated income statement; the cash flows of the subsidiary or business from the acquisition date to the end of the reporting period are included in the consolidated statement of cash flow.

For reasons such as additional investments that can control an investee not under the same control, the Company remeasures the equity of the acquiree held before the purchase date according to the fair value of the equity on the purchase date, and the balance between the fair value and its book value is included in the current investment income. If the equity of the acquiree held before the purchase date involves other comprehensive income under the equity method and other changes in owner's equity other than net profit or loss, other comprehensive income and profit distribution, other comprehensive income and other changes in owner's equity related to it shall be converted into the investment income of the current period on the date of purchase, except for other comprehensive income arising from the re-measurement of the net liabilities or changes in net assets of the defined benefit plan of the investee.

(2) Disposal of subsidiaries or businesses

① General treatment method

During the reporting period, when the Company disposes of a subsidiary or business, the income, expenses and profits of the subsidiary or business from the beginning of the period to the disposal date are included in the consolidated income statement, while the cash flow of the subsidiary or the business from the beginning of the period to the disposal date is included in the consolidated statement of cash flow.

For control rights loss in original subsidiary for partial equity investment disposal or other reasons, the remained equity should re-measured based on the fair value at date of control losses. The difference between the net assets of original subsidiary share by proportion held that sustainable calculated since purchased date (or combination date) and sum of consideration obtained by equity disposal and fair value of remain equity, reckoned into the current investment income of control rights loss. Other comprehensive income related to the original subsidiary's equity investment or other changes in owner's equity other than net profit and loss, other comprehensive income and profit distribution will be converted to current investment income when the control is lost, except for other comprehensive income arising from the remeasurement of the net liabilities or changes in net assets of the defined benefit plan of the investee.

If other investors' capital increases in the subsidiary results in a decline in the Company's shareholding ratio and thus loss of control power, accounting shall be conducted in accordance with the above principles.

② Dispose subsidiary step-by-step

When the Company disposes of equity investment in a subsidiary by a stage-up approach with several transactions until the control over the subsidiary is lost, these several transactions related to the disposal of equity investment in a subsidiary are accounted for as transactions in a basket when the terms, conditions and economic impacts of these several transactions meet the following one or more conditions:

- i. these transactions are entered into at the same time or after considering their impacts on each other;
- ii. these transactions as a whole can reach complete business results;
- iii the occurrence of a transaction depends on at least the occurrence of an other transaction;
- iv. an individual transaction is not deemed as economic, but is deemed as economic when considered with other transactions.

When several transactions related to the disposal of equity investment in a subsidiary until the control over the subsidiary is lost fall within transactions in a basket, each of which is accounted for as disposal of a subsidiary with a transaction until the control over a subsidiary is lost; however, the difference between the amount of disposal prior to the loss of control and the net assets of a subsidiary attributable to the disposal investment shall be recognized as other comprehensive income in consolidated financial statements and transferred to profit or loss for the period at the time when the control is lost.

If the transactions that dispose of the equity investment in the subsidiary until the loss of control do not belong to the package transaction, before the loss of control, the relevant policies for partial disposal of the equity investment in the subsidiary shall be accounted for without losing control. When the control right is lost, the accounting treatment shall be carried out according to the general treatment method for disposing of the subsidiary.

(3) Purchase of minority shares in subsidiaries

The difference between the Company's newly acquired long-term equity investment due to the purchase of minority shares and the net assets share calculated continuously by the subsidiary from the date of purchase (or merger date) in accordance with the calculation of the newly increased shareholding ratio, adjust the equity premium in the capital reserve in the consolidated balance sheet, if the equity premium in the capital reserve is insufficient to offset, adjust the retained earnings.

(4) Partial disposal of equity investment in subsidiaries without losing control

The difference between the disposal cost obtained as a result of partial disposal of long-term equity investment in a subsidiary without losing control and the net assets share calculated continuously by the subsidiary from the date of purchase or merger corresponding to the disposal of the long-term equity investment, adjust the equity premium in the capital reserve in the consolidated balance sheet, if the equity premium in the capital reserve is insufficient to offset, adjust the retained earnings.

(7) Classification of joint arrangement and accounting treatment

Joint arrangement is divided into joint operation and joint venture.

As a joint party of the joint arrangement, it is a joint operation when the Company enjoys assets related to the arrangement and bears the liabilities related to the arrangement.

The company confirms the following items related to the share of interests in its joint operations, and in accordance with the provisions of the relevant accounting standards for accounting treatment:

- (1) Recognize the assets held solely by the Company, and recognize assets held jointly by the Company in appropriation to the share of the Company;
- (2) Recognize the obligations assumed solely by the Company, and recognize obligations assumed jointly by the Company in appropriation to the share of the Company;
- (3) Recognize revenue from disposal of the share of joint operations of the Company;

(4) Recognize fees solely occurred by Company;

(5) Recognize fees from joint operations in appropriation to the share of the Company.

Accounting policy for the joint venture investment found more in (14) Long-term equity investment under Note III.

(8) Determination criteria of cash and cash equivalent

While preparing the cash flow statement, the stock cash and savings available for payment at any time are recognized as cash. The investments meets the follow four conditions at the same time are recognized as cash equivalent, that is short-term (normally fall due within three months from the date of acquisition) and highly liquid investments held the Group which are readily convertible into known amounts of cash and which are subject to insignificant risk of value change.

(9) Foreign currency business and foreign currency statement translation

1.Foreign currency business

Foreign currency business uses the spot exchange rate on the transaction date as the conversion rate to convert foreign currency amounts into RMB for accounting.

The balance of foreign currency monetary items at the balance sheet date is converted at the spot exchange rate on the balance sheet date, the resulting exchange difference is included in current profit and loss, except that the exchange difference arising from foreign currency special borrowings related to the acquisition or construction of assets eligible for capitalization is disposed with the principle of borrowing costs capitalization.

2. Foreign currency statement translation

Assets and liabilities in the balance sheet are converted at the spot exchange rate on the balance sheet date; the owners' equity items are converted at the spot exchange rate at the time of occurrence, except for the "undistributed profit" item. The income and expense items in the income statement are converted at the spot exchange rate on the transaction date.

When disposing of an overseas operation, the translation difference in the foreign currency financial statements related to the overseas operation is transferred from the owner's equity item to the disposal of current profit or loss.

(10) Financial instrument

Financial instrument consist of financial assets, financial liability and equity instrument.

1.Classification of financial instrument

Based on the Company's business model for managing financial assets and the contractual cash flow characteristics of financial assets, financial assets are classified as the financial assets measured at amortized cost, the financial assets (debt instruments) measured at fair value and whose changes are included in other comprehensive income and the financial assets measured at fair value and whose changes are included in current profit and loss at initial recognition.

Business model to collect the contractual cash flow, and the contractual cash flow is only the payment of the principal and the interest based on the outstanding principal amount, is classified as a financial asset measured at

amortized cost; business model to collect the contractual cash flow and sell the financial asset, and the contractual cash flow is only the payment of principal and the interest based on the outstanding principal amount, is classified as a financial asset measured at fair value and whose changes are included in other comprehensive income (debt instruments); other financial assets other than these are classified as financial assets measured at fair value and whose changes are included in the current profit and loss.

For a non-tradable equity instrument investment, the Company determines at the time of initial recognition whether to designate it as a financial asset (equity instrument) measured at fair value and whose changes are included in other comprehensive income. At the time of initial recognition, in order to eliminate or significantly reduce accounting mismatches, financial assets can be designated as financial assets that are measured at fair value and whose changes are included in the current profit and loss.

At the time of initial recognition, financial liabilities are classified into financial liabilities that are measured at fair value and whose changes are included in the current profit and loss and financial liabilities that are measured at amortized cost.

A financial liability that meets one of the following conditions can be designated as a financial liability measured at fair value and whose changes are included in current profit and loss at initial measurement:

- 1) This designation can eliminate or significantly reduce accounting mismatches.
- 2) In accordance with the corporate risk management or investment strategy stated in formal written documents, make management and performance evaluation to financial liability portfolios or financial assets and financial liability portfolios based on fair value, and report to the key management personnel within the enterprise based on this.
- 3) The financial liability includes embedded derivatives that need to be split separately.

2. Recognition basis and measurement method of financial instruments

(1) Financial assets measured at amortized cost

Financial assets measured at amortized cost include bills receivable, accounts receivable, other receivables, long-term receivables, debt investment, etc., which are initially measured at fair value, and related transaction costs are included in the initially recognized amount; accounts receivable excluding significant financing components and accounts receivable with financing components not exceeding one year that the Company decides not to consider are initially measured at the contract transaction price.

The interest calculated by using the effective interest method during the holding period is included in the current profit and loss.

When taking back or disposing, the difference between the cost obtained and the book value of the financial asset is included in the current profit and loss.

(2) Financial assets (debt instrument) measured at fair value and whose changes are reckoned into other comprehensive income

The financial assets (debt instrument) measured at fair value and whose changes are reckoned into other comprehensive income consist of receivable financing and other debt investment and initially measured at fair value, relevant transaction fees are included in initial recognized amount. The financial assets are subsequently measured at fair value, and the fair value changes are reckoned into other comprehensive income except for the

interest, impairment loss or gain and exchange gain or loss calculated by actual interest rate method.

Upon termination of the recognition, the accumulated gains or losses previously included in other comprehensive income shall be transferred out and reckoned into current profit and loss.

(3) Financial assets (equity instrument) measured at fair value and whose changes are reckoned into other comprehensive income

The financial assets (equity instrument) measured at fair value and whose changes are reckoned into other comprehensive income consist of the equity instrument investment etc. and initially measured at fair value, relevant transaction fees are included in initial recognized amount. The financial assets are subsequently measured at fair value, and the fair value changes are reckoned into other comprehensive income. The dividend obtained should reckoned into current gains/losses.

Upon termination of the recognition, the accumulated gains or losses previously included in other comprehensive income shall be transferred out and reckoned into retained earnings.

(4) Financial assets measured at fair value and whose changes are reckoned into current gains/losses

The financial assets measured at fair value and whose changes are reckoned into current gains/losses consist of trading financial assets, derivative financial assets and other non-current financial assets etc. and initially measured at fair value, relevant transaction fees are included in current gains/losses. The financial assets are subsequently measured at fair value, and the fair value changes are reckoned into current gains/losses.

Upon termination of the recognition, the difference between its fair value and initial entry amount is recognized as investment income, and adjust the gains/losses from fair value changes at the same time.

(5) Financial liability measured at fair value and whose changes are reckoned into current gains/losses

The financial liability measured at fair value and whose changes are reckoned into current gains/losses consist of trading financial liability and derivative financial liability etc. and initially measured at fair value, relevant transaction fees are included in current gains/losses. The financial liabilities are subsequently measured at fair value, and the fair value changes are reckoned into current gains/losses.

Upon termination of the recognition, the difference between its fair value and initial entry amount is recognized as investment income, and adjust the gains/losses from fair value changes at the same time.

(6) Financial liability measured at amortized cost

The financial liabilities measured at amortized cost consist of short-term loans, note payable, account payable, other account payable, long-term loans, bond payable and long-term account payable, and initially measured at fair value, relevant transaction fees are included in initial recognized amount.

The interests calculated by effective interest rate method during the holding period is reckoned into current gains/losses.

Upon termination of the recognition, the difference between consideration paid and the book value of financial liability is reckoned into current gains/losses.

3. Recognition basis and measurement method for transfer of financial assets

When the Company transfers financial assets, if almost all risks and rewards of ownership of financial assets have been transferred to the transferee, derecognize the financial assets; if almost all risks and rewards of ownership of financial assets have been retained, don't derecognize the financial assets.

When determining whether the transfer of financial assets meets the above conditions for the termination of recognition of financial assets, adopt the principle of substance over form. The Company distinguishes the transfer of financial assets into overall transfers and partial transfers of financial assets. If the overall transfer of financial assets meets the conditions for derecognition, the difference between the following two amounts is included in the current profit and loss:

- (1) The book value of the transferred financial assets;
- (2) The sum of the consideration received as a result of the transfer and the cumulative amount of changes in the fair value that were directly credited to the owner's equity (the transferred financial asset is an available-for-sale financial asset).

If partial transfer of financial assets meets the conditions for derecognition, the entire book value of the transferred financial assets is apportioned between the derecognized parts and non-derecognized parts according to their relative fair values, and the difference between the following two amounts is included in the current profit and loss:

- (1) The book value of the derecognition part;
- (2) The sum of the consideration of the derecognition part and the amount corresponding to the derecognition part of the cumulative total of changes in fair value that were directly credited to the owner's equity (the transferred financial asset is an available-for-sale financial asset).

If the transfer of financial assets does not meet the conditions for derecognition, the financial assets are continuously recognized, and the consideration received is recognized as a financial liability.

4. Termination recognition of financial liability

Where the current obligation of a financial liability have been discharged in whole or in part, the recognition of the financial liability or part thereof shall be terminated; If the Company entered into an agreement with its creditors to replace its existing financial liabilities with the new financial liability, and the contract terms of the new financial liabilities and the existing financial liabilities are substantially different, the existing financial liabilities shall be terminated for recognition and the new ones shall be recognized at the same time. As for substantive changes made to the contract terms (in whole or in part) of the existing financial liabilities, the existing financial liabilities (or part of it) will be terminated for recognition, and the financial liabilities after term revision will be recognized as a new financial liability.

When a financial liability is derecognized in whole or in part, the difference between the book value of the financial liability derecognized and the consideration paid (including the non-cash assets transferred out or the new financial liabilities assumed) is included in the current profit and loss.

If the Company repurchases part of the financial liabilities, the entire book value of the financial liabilities will be allocated on the repurchase date according to the relative fair value of the continuing recognition part and the derecognition part. The difference between the book value allocated to the derecognition part and the consideration paid (including the transferred non-cash assets or assumed new financial liabilities) is included in the current profit and loss.

5. Methods for determining the fair value of financial assets and financial liabilities

For financial instruments that have an active market, their fair values are determined by using quotes in the active market. For financial instruments that do not have an active market, valuation techniques are used to determine their fair values. In the valuation, the Company adopts valuation techniques that are applicable under the current circumstances and have sufficient available data and other information support, chooses the input values consistent with the characteristics of assets or liabilities considered by market participants in the transactions of related assets or liabilities, and prioritizes the relevant observable input values. The Company uses unobservable input values only if the relevant observable input values cannot be obtained or are not practicable.

6. Test methods and accounting treatment methods for impairment of financial assets (excluding receivables)

The Company considers all reasonable and evidence-based information, including forward-looking information, and estimates the expected credit losses of financial assets measured at amortized cost by the single or combined way and financial assets (debt instruments) measured at fair value and whose changes are included in other comprehensive income. The measurement of expected credit losses depends on whether a significant increase in credit risk has occurred since the initial recognition of a financial asset.

If the credit risk of the financial instrument has increased significantly since initial recognition, the Company shall measure its loss provision at an amount equivalent to the expected credit loss throughout the life of the financial instrument. If the credit risk of the financial instrument has not increased significantly since initial recognition, the Company shall measure its loss provision at an amount equivalent to the expected credit loss of the financial instrument in the next 12 months. The increased or reversed amount of the loss provision thus formed shall be included in the current profit and loss as impairment losses or gains.

Usually, the Company considers that the credit risk of the financial instrument has increased significantly when it is overdue for more than 30 days, unless there is conclusive evidence that the credit risk of the financial instrument has not increased significantly after initial recognition.

If the credit risk of a financial instrument at the balance sheet date is low, the Company will consider that the credit risk of the financial instrument has not increased significantly since initial recognition.

(11) Bad deb provision of account receivable

Regarding account receivables, whether or not it contains a significant financing component, the Company always measures its loss provisions at an amount equivalent to the expected credit loss throughout the duration, and the resulting increase and reversed amount of loss provisions is included in the current profit and loss as impairment losses or gains.

In addition to receivables that individually assess credit risk, based on their credit risk characteristics, they are divided into different portfolios:

Item	Accrual ratio for account receivable (%)
Group 1: low-risk	The portfolio is determined based on the similarity of credit risk characteristics, the Company believes

Item	Accrual ratio for account receivable (%)
	that the credit risk of a receivable that has not been impaired in a single assessment of credit risk is low, and no provision for bad debts is made unless there is evidence that the credit risk of a certain receivable is high.

If there is objective evidence that a certain account receivable has suffered credit impairment, the Company shall make provision for bad debts on that account receivable and confirm the expected credit loss.

(12) Inventory

1. Categories of inventory

Inventory consists of fuels and raw materials etc.

2. Valuation method of delivered inventory

The inventories are initially measured at cost. When the inventory is delivered, the actual cost of delivered inventory shall be determined by weighted average method.

3. Basis for determining the net realizable value of different types of inventories

On the balance sheet day, the inventory is measured by the lower one between the cost and the net realizable value. As the net realizable value is lower than the cost, the inventory depreciation provision is accrued. The net realizable value is balance of the estimated sale price less the estimated forthcoming cost upon the completion, the estimated sale expense, and the relevant tax in the daily activities. Upon the recognition of net realizable value of the inventory, the concrete evidence is based on and the purpose of holding the inventory and the influence of events after the balance sheet day are considered.

As for the inventory of large sum and lower price, the inventory depreciation provision is accrued by the inventory categories. As for the inventory related to the product series produced and sold in the same district, of the same or similar final use or purpose and impossible to be separated from the other items, the provision is consolidated and accrued. The provision for other inventory is accrued by the difference between the cost and net realizable value.

Upon the accrual of the inventory depreciation provision, if the previous influence factors on the inventory deduction disappeared, which resulted in the net realizable value being higher than its book value; the accrual is transferred back within the previous accrual of the provision and reckoned into the current gain/loss.

4. Inventory system

Perpetual inventory system required

5. Amortization method of low-value consumables and packaging

(1) Low-value consumables-one pass method

(2) Packaging- one pass method

(13) Contract assets

1. Confirmation methods and standards of contract assets

If the Company has transferred goods to customers and has the right to receive consideration, and the right depends on factors other than the time lapses, it is recognized as contract assets. The Company's unconditional (that is, only depending on the time lapses) right to collect consideration from customers are separately listed as receivables.

2. Determination method and accounting treatment method of expected credit loss of contract assets

The Company's determination method and accounting treatment method for the expected credit loss of contract assets are detailed in Note III/(11) Provision for bad debts of receivables

(14) Long-term equity investment

1. Criteria judgement for joint control and significant influence

Joint control is the Company's contractually agreed sharing of control over an arrangement, which relevant activities of such arrangement must be decided by unanimously agreement from parties who share control. Where the Company and other joint ventures exercise joint control over the investee and enjoy the rights to the net assets of the investee, the investee is a joint venture of the Company.

Significant influence is the right of the Company to participate in the financial and operation decision-making of an enterprise, but not to control or jointly control the formulation of such policies with other parties. Where the Company is able to exert significant influence on the investee, the investee shall be a joint venture of the Company.

2. Determination of initial investment cost

(1) Long-term equity investment resulting from enterprise combination

Enterprise combination under the same control: If the Company pays cash, transfers non-cash assets or assumes debt, and issues equity securities as the consideration for the merger, the share of the book value of the owner's equity of the combined party in the consolidated financial statements of the ultimate controlling party on the combining date shall be used as the initial investment cost of long-term equity investment. If it is possible to control the investee under the same control due to additional investments, etc., the initial investment cost of long-term equity investment shall be determined based on the share of the book value of the net assets of the combined party in the consolidated financial statements of the ultimate controlling party on the merger date. The difference between the initial investment cost of the long-term equity investment on the merger date and the sum of the book value of the long-term equity investment before the merger plus the book value of the new share payment consideration obtained on the merger date adjusts the equity premium. If the equity premium is insufficient to be offset, the retained earnings shall be offset.

Business combination not under the same control: The Company uses the combination cost determined on the purchase date as the initial investment cost of the long-term equity investment. If it is possible to exercise control over an investee that is not under the same control due to additional investments, etc., the sum of the book value of the original equity investment plus the newly increased investment cost is used as the initial investment cost

calculated by the cost method.

(2) Long-term equity investment obtained through other methods

For a long-term equity investment obtained by paying cash, the actually paid purchase price is taken as the initial investment cost.

For a long-term equity investment obtained by issuing equity securities, the fair value of the issued equity securities is taken as the initial investment cost.

On the premise that the non-monetary asset exchange has commercial substance and that the fair value of the assets swapped in or out can be reliably measured, the initial investment cost of the long-term equity investment swapped in by non-monetary assets exchange is determined by the fair value of assets swapped out and the relevant payable taxes and fees, unless there is conclusive evidence that the fair value of the assets swapped in is more reliable; for non-monetary assets exchange that do not meet the above preconditions, the book value of the assets swapped out and the relevant taxes and fees payable are used as the initial investment cost of the long-term equity investment swapped in.

For a long-term equity investment obtained through debt restructuring, its entry value is determined based on the fair value of the abandoned creditor's rights and other costs such as taxes directly attributable to the asset, and the difference between the fair value of the abandoned creditor's rights and the book value is included in the current profit and loss.

3. Follow-up measurement and gain/loss recognition

(1) Long-term equity investment measured at cost

The long-term equity investment in subsidiaries shall be measured at cost. In addition to the actual prices or the announced but yet undistributed cash dividend or profit in consideration valuation, the current investment return is recognized by the announced cash dividend or profit by the invested units.

(2) Long-term equity investment measured at equity

The long-term equity investment in associated enterprise and joint ventures shall be measured at cost. If the initial investment cost is greater than the share of fair value of the invested entity's identifiable net assets, the initial investment cost of the long-term equity investment will not be adjusted; if the initial investment cost is less than the share of fair value of the invested entity's identifiable net assets, the difference shall be reckoned in current gains/losses.

The investment gain and other comprehensive income shall be recognized based on the Company's share of the net profits or losses and other comprehensive income made by the investee, respectively. Meanwhile, the carrying amount of long-term equity investment shall be adjusted. The carrying amount of long-term equity investment shall be reduced based on the Group's share of profit or cash dividend distributed by the investee. In respect of the other movement of net profit or loss, other comprehensive income and profit distribution of investee, the carrying value of long-term equity investment shall be adjusted and included in the owners' equity.

The Company shall recognize its share of the investee's net profits or losses based on the fair values of the investee's individual separately identifiable assets at the time of acquisition, after making appropriate adjustments

thereto during the accounting period and according to the accounting policy of the Company. During the period of holding the investment, the investee prepares the consolidated financial statements based on the net profit, other comprehensive income, and the amount attributable to the investee in changes in other owners' equity in the consolidated financial statements for business accounting.

When the Company confirms that it should share the losses incurred by the investee, it shall proceed in the following order. Firstly, write off the book value of the long-term equity investment. Secondly, if the book value of the long-term equity investment is not sufficient to offset, the investment loss shall continue to be recognized within the limit of the book value of long-term equity that substantially constitutes a net investment in the investee, and offset the book value of long-term receivables. Finally, after the above-mentioned treatment, if the enterprise still bears additional obligations as stipulated in the investment contract or agreement, the estimated liabilities are recognized according to the estimated obligations and included in the current investment loss.

(3) Disposal of long-term equity investment

When disposing of a long-term equity investment, the difference between its book value and the actual purchase price is included in the current profit and loss.

When disposing of a long-term equity investment accounted for by using the equity method, use the same basis as the investee directly disposes of related assets or liabilities, and make accounting treatment to the portion that was originally included in other comprehensive income according to the corresponding proportion. The owner's equity recognized as a result of changes in other owner's equity of the investee other than net profit or loss, other comprehensive income, and profit distribution is carried forward to the current profit and loss on a pro rata basis, except for other comprehensive income arising from the remeasurement of the net liabilities or net assets changes of the defined benefit plan by the investee.

If the joint control or significant influence on the investee is lost due to the disposal of part of the equity investment, etc., the remaining equity after disposal shall be calculated in accordance with the financial instrument recognition and measurement standards, and the difference between the fair value and the book value on the day of losing the joint control or significant influence is included in the current profit and loss. Other comprehensive income of the original equity investment recognized due to using the equity method for accounting shall adopt the accounting treatment on the same basis as the investee directly disposes of related assets or liabilities when terminating the adoption of equity method for accounting. The owner's equity recognized as a result of changes in the owner's equity other than net profit or loss, other comprehensive income and profit distribution of the investee is transferred to current profit and loss when terminating the adoption of equity method for accounting.

The control over the investee is lost due to the disposal of part of the equity investment and the capital increase in the subsidiary by other investors resulting in a decline in the shareholding ratio of the Company, in preparing separate financial statements, the remaining equity interest which can apply common control or impose significant influence over the investee shall be accounted for using equity method. Such remaining equity interest shall be treated as accounting for using equity method since it is obtained and adjustment was made accordingly. For remaining equity interest which cannot apply common control or impose significant influence over the investee, it shall be accounted for using the recognition and measurement standard of financial instruments. The difference between its fair value and carrying amount as at the date of losing control shall be included in profit or loss for the current period.

The disposed equity is obtained through business combination due to additional investment and other reasons, when preparing individual financial statements, if the remaining equity after disposal uses cost method or equity method for accounting, the equity investments held before the acquisition date shall be carried forward in proportion to other comprehensive income and other owner's equity recognized through equity method accounting; For the remaining equity interest after disposal accounted for using the recognition and measurement standard of financial instruments, other comprehensive income and other owners' equity shall be fully transferred.

(15) Investment real estate

Investment real estate is defined as the real estate with the purpose to earn rent or capital appreciation or both, including the rented land use rights and the land use rights which are held and prepared for transfer after appreciation, the rented buildings. (Including buildings for lease after self-construction or development activities completed and buildings under construction or development for lease in the future)

Investment real estate of the Company are measured at cost model. The Investment real estate- rental buildings measured at cost model has the same depreciation policy as fixed assets, the land use right for lease is exercise the amortization policy as intangible assets.

(16) Fixed assets

1. Recognition conditions for the fixed assets

Fixed assets is defined as the tangible assets which are held for the purpose of producing goods, providing services, lease or for operation & management, and have more than one fiscal year of service life. Fixed assets are recognized when the following conditions are simultaneously met:

- (1) The economic benefits with the fixed assets concerned are likely to flow into the enterprise; and
- (2) cost of the fixed assets can be measured reliably.

2. Depreciation method

From the next month since reaching the intended use state, depreciation on fixed assets shall be accounted by using the method of average life length except the steam turbine generating unit that accounted by withdrawal the working volume method.

Life expectancy, expected net impairment value and annual depreciation rate of all assets are as follows:

Category	Depreciation method	Depreciation life (Year)	Residuals rate(%)	Annual depreciation rate (%)
Houses and buildings	Straight-line	20-year	10	4.5
Equipment (fuel machinery sets)	Straight-line	15-20-year	10	4.5-6

Category	Depreciation method	Depreciation life (Year)	Residuals rate(%)	Annual depreciation rate (%)
excluded)				
Equipment-fuel machinery sets(Note)	The work quantity method		10	The work quantity method
Transportation tools	Straight-line	5-year	10	18
Other equipment	Straight-line	5-year	10	18

Estimated salvage value refers to the amount of value retrieved after deducting of predicted disposal expense when the expected using life of a fixed asset has expired and in the expected state of termination.

Note: gas turbine generator set is provided with depreciation under workload method, namely to determine the depreciation amount per hour of gas turbine generator set based on equipment value, predicted net remaining value and predicted generation hours. Details are set out as follows:

Name of the Company	Fixed assets	Depreciation amount (RMB/Hour)
The Company	Generating unit 1#	538.33
	Generating unit 3#	601.20
New Power	Generating unit 10#	520.61
Zhongshan Electric Power	Generating unit 1#	4,246.00
	Generating unit 3#	4,160.83

3. Recognition basis and measurement method of fixed assets under finance lease

Leases are classified as finance leases whenever the terms of the lease transfer substantially all the risks and rewards of ownership to the lessee. Title may or may not eventually be transferred. The depreciation policy for fixed asset held under finance lease is consistent with that for its owned fixed asset. When a leased asset can be reasonably determined that its ownership will be transferred at the end of the lease term, it is depreciated over the period of expected use; otherwise, the leased asset is depreciated over the shorter period of the lease term and the period of expected use.

4. Other explanation

Concerning the follow-up expenses related to fixed assets, if the relevant economy benefit of fixed assets probably in-flow into the Company and can be measured reliably, reckoned into cost of fixed assets and terminated the

recognition of the book value of the parts that been replaced. Others follow-up expenses should reckoned into current gains/losses while occurred.

Terminated the recognition of fixed assets that in the status of disposal or pass through the predicted usage or without any economy benefits arising from disposal. Income from treatment of fixed asset disposing, transferring, discarding or damage, the balance after deducting of book value and relative taxes is recorded into current income account.

The Company re-reviews useful life, expected net residual value and depreciation method of fixed assets at least at each year end. Any change thereof would be recorded as change of accounting estimates.

(17) Construction in process

Cost of construction in process is determined at practical construction expenditures, including all expenses during the construction, capitalized loan expenses before the construction reaches useful status, and other relative expenses. It is transferred to fixed asset as soon as the construction reaches the useful status.

(18) Borrowing expenses

Borrowing expenses include interest, amortization of discounts or premiums related to borrowings, ancillary costs incurred in connection with the arrangement of borrowings, and exchange differences arising from foreign currency borrowings. Borrowing expenses that can be directly attributed for purchasing or construction of assets that are complying with capitalizing conditions start to be capitalized when the payment of asset and borrowing expenses have already occurred, and the purchasing or production activities in purpose of make the asset usable have started; Capitalizing will be terminated as soon as the asset that complying with capitalizing conditions has reached its usable or saleable status. The other borrowing expenses are recognized as expenses when occurred.

Interest expenses practically occurred at the current term of a special borrowing are capitalized after deducting of the bank saving interest of unused borrowed fund or provisional investment gains; Capitalization amounts of common borrowings are decided by the weighted average of exceeding part of accumulated asset expenses over the special borrowing assets multiply the capitalizing rate of common borrowings adopted. Capitalization rates are decided by the weighted average of common borrowings.

During the capitalization period, exchange differences on a specific purpose borrowing denominated in foreign currency shall be capitalized. Exchange differences related to general-purpose borrowings denominated in foreign currency shall be included in profit or loss for the current period.

Qualifying assets are assets (fixed assets, investment property, inventories, etc.) that necessarily take a substantial period of time for acquisition, construction or production to get ready for their intended use or sale.

Capitalization of borrowing costs shall be suspended during periods in which the acquisition, construction or production of a qualifying asset is interrupted abnormally, when the interruption is for a continuous period of more than 3 months, until the acquisition, construction or production of the qualifying asset is resumed.

(19) Intangible assets

An intangible asset is an identifiable non-monetary asset without physical substance owned or controlled by the Company.

An intangible asset shall be initially measured at cost. The expenditures incurred on an intangible asset shall be recognized as cost of the intangible asset only if it is probable that economic benefits associated with the asset will flow to the Company and the cost of the asset can be measured reliably. Other expenditures on an item asset shall be charged to profit or loss when incurred.

Land use right acquired shall normally be recognized as an intangible asset. Self-constructed buildings (e.g. plants), related land use right and the buildings shall be separately accounted for as an intangible asset and fixed asset. For buildings and structures purchased, the purchase consideration shall be allocated among the land use right and the buildings on a reasonable basis. In case there is difficulty in making a reasonable allocation, the consideration shall be recognized in full as fixed assets.

An intangible asset with a finite useful life shall be stated at cost less estimated net residual value and any accumulated impairment loss provision and amortized using the straight-line method over its useful life when the asset is available for use. Intangible assets with indefinite life are not amortized.

The Group shall review the useful life of intangible asset with a finite useful life and the amortization method applied at least at each financial year-end. A change in the useful life or amortization method used shall be accounted for as a change in accounting estimate. For an intangible asset with an indefinite useful life, the Group shall review the useful life of the asset in each accounting period. If there is evidence indicating that the useful life of that intangible asset is finite, the Company shall estimate the useful life of that asset and apply the accounting policies accordingly.

(20) Impairment of long-term assets

The Group will judge if there is any indication of impairment as at the balance sheet date in respect of non-current non-financial assets such as fixed assets, construction in process, intangible assets with an infinite useful life, investment properties measured at cost, and long-term equity investments in subsidiaries, joint ventures and associates. If there is any evidence indicating that an asset may be impaired, recoverable amount shall be estimated for impairment test. Goodwill, intangible assets with an indefinite useful life and intangible assets beyond working conditions will be tested for impairment annually, regardless of whether there is any indication of impairment.

If the impairment test result shows that the recoverable amount of an asset is less than its carrying amount, the impairment provision will be made according to the difference and recognized as an impairment loss. The recoverable amount of an asset is the higher of its fair value less costs of disposal and the present value of the future cash flows expected to be derived from the asset. An asset's fair value is the price in a sale agreement in an arm's length transaction. If there is no sale agreement but the asset is traded in an active market, fair value shall be determined based on the bid price. If there is neither sale agreement nor active market for an asset, fair value shall be based on the best available information. Costs of disposal are expenses attributable to disposal of the asset,

including legal fee, relevant tax and surcharges, transportation fee and direct expenses incurred to prepare the asset for its intended sale. The present value of the future cash flows expected to be derived from the asset over the course of continued use and final disposal is determined as the amount discounted using an appropriately selected discount rate. Provisions for assets impairment shall be made and recognized for the individual asset. If it is not possible to estimate the recoverable amount of the individual asset, the Group shall determine the recoverable amount of the asset group to which the asset belongs. The asset group is the smallest group of assets capable of generating cash flows independently.

For the purpose of impairment testing, the carrying amount of goodwill presented separately in the financial statements shall be allocated to the asset groups or group of assets benefiting from synergy of business combination. If the recoverable amount is less than the carrying amount, the Group shall recognize an impairment loss. The amount of impairment loss shall first reduce the carrying amount of any goodwill allocated to the asset group or set of asset groups, and then reduce the carrying amount of other assets (other than goodwill) within the asset group or set of asset groups, pro rata on the basis of the carrying amount of each asset.

Once an impairment loss of these assets is recognized, it is not allowed to be reversed even if the value can be recovered in subsequent period.

(21) Long-term unamortized expenses

Long-term unamortized expenses are those already occurred and amortizable to the current term and successive terms for over one year. Long-term amortizable expenses are amortized by straight-line method to the benefit period.

(22) Contract liabilities

1. Confirmation method of contract liabilities

The Company's obligation to transfer goods or provide services to customers for consideration received or receivable from customers is listed as contract liabilities.

(23) Staff remuneration

Staff remuneration includes short term staff remuneration, post office benefit, dismissal benefit and other long term staff benefits, among which:

Short term staff remuneration mainly consists of salary, bonus, allowance and subsidy, staff benefits, medical insurance, maternity insurance, work related injury insurance, housing funds, labor unit fee and education fee, non-monetary benefits, etc. short term staff remuneration actually happened during the accounting period in which staff provides services to the Company is recognized as liability, and shall be included in current gains and losses or relevant asset cost. Non-monetary benefits are measured at fair value.

Post office benefits mainly consist of defined withdraw plan and defined benefit plan. Defined withdraw plan mainly includes basic pension insurance, unemployment insurance and annuity, and the contribution payable is included in relevant asset cost or current gains and losses when occurs.

When the Company terminates the employment relationship with employees before the end of the employment contracts or provides compensation as an offer to encourage employees to accept voluntary redundancy, the Company shall recognize employee compensation liabilities arising from compensation for staff dismissal and included in profit or loss for the current period, when the Company cannot revoke unilaterally compensation for dismissal due to the cancellation of labor relationship plans and employee redundant proposals; and the Company recognize cost and expenses related to payment of compensation for dismissal and restructuring, whichever is earlier. However, if the compensation for termination of employment is not expected to be fully paid within 12 months from the reporting period, it shall be accounted for other long-term staff remuneration.

The early retirement plan shall be accounted for in accordance with the accounting principles for compensation for termination of employment. The salaries or wages and the social contributions to be paid for the employees who retire before schedule from the date on which the employees stop rendering services to the scheduled retirement date, shall be recognized (as compensation for termination of employment) in the current profit or loss by the Group if the recognition principles for provisions are satisfied.

For other long-term employee benefits provided by the Company to its employees, if satisfy with the established withdraw plan, then the benefits are accounted for under the established withdraw plan, otherwise accounted for under defined benefit scheme.

(24) Accrual liability

1. Recognition criteria

The obligations with contingencies concerned as litigation, debt guarantee and contract in loss are recognized as accrual liability when the following conditions are met simultaneously:

- (1) the liability is the current liability that undertaken by the Company;
- (2) the liability has the probability of result in financial benefit outflow; and
- (3) the responsibility can be measured reliably for its value.

Measurement on vary accrual liability

At balance sheet day, with reference to the risks, uncertainty and periodic value of currency that connected to the contingent issues, the predicted liabilities are measured according to the best estimation on the payment to fulfill the current responsibility.

If the expenses for clearing of predictive liability is fully or partially compensated by a third party, and the compensated amount can be definitely received, it is recognized separated as asset. The compensated amount shall not be greater than the book value of the predictive liability.

(1) Contract in loss

Contract in loss is identified when the inevitable cost for performance of the contractual obligation exceeds the inflow of expected economic benefits. When a contract in loss is identified and the obligations there under are qualified by the aforesaid recognition criterion for contingent liability, the difference of estimated loss under

contract over the recognized impairment loss (if any) of the subject matter of the contract is recognized as contingent liability.

(2) Restructuring obligations

For detailed, official and publicly announced restructuring plan, the direct expenses attributable to the restructuring are recognized as contingent liabilities, provided that the aforesaid recognition criterion for contingent liability is met. For restructuring obligations arising from disposal of part business, the Company will recognize the obligations relating to restructuring only when it undertakes to dispose part business (namely entering into finalized disposal agreement).

(25) Revenue

The Company's revenue is recognized after it has fulfilled the performance obligations in the contract, that is, when the customer obtains control of the relevant assets (goods or services). Whether the performance obligation is fulfilled within a certain period of time or at a certain time point depends on the terms of the contract and relevant legal provisions. If the Company meets one of the following conditions, it belongs to the performance obligation within a certain period of time:

1. The customer obtains and consumes the economic benefits brought by the Company's performance when the Company fulfills its performance.
2. The client can control the assets under construction during the performance of the Company.
3. The assets produced by the Company during the performance have irreplaceable uses, and the Company has the right to collect payment for the cumulative performance that has been completed so far during the entire contract period.

If the performance obligation is performed within a certain period of time, the Company recognizes revenue according to the performance progress. Otherwise, the Company recognizes revenue at a certain point when the customer obtains control of the relevant assets. The performance progress is measured by the Company's expenditure or investment in fulfilling the performance obligations, and the progress is determined based on the proportion of the cumulative cost incurred as of the balance sheet date of each contract to the estimated total cost.

When determining the contract transaction price, if there is a variable consideration, the Company shall determine the best estimate of the variable consideration based on the expected value or the most likely amount, and the amount that does not exceed the cumulatively recognized revenue when the relevant uncertainty is eliminated and that is very likely not to have significant reversal is included in the transaction price. If there is a major financing component in the contract, the Company will adjust the transaction price according to the financing component in the contract; if the interval between the transfer of control and the payment by the customer is less than one year, the Company will not consider the financing component.

Detail recognition according to specific revenue:

1. Power marketing revenue

The Group generates electricity by thermal power, and realizes sales through incorporation into Guangdong power grid. As for power sales, the Group realizes revenue when it produces electricity and obtains the grid power statistics table confirmed by the power bureau.

2. Specific criteria for revenue recognition of the Environment Protection Company

At the end of each month, the company confirms the monthly income based on the initially confirmed sludge transportation volume and sludge treatment price, and revises the revenue confirmed last month after checking with the relevant units in the next month, and the correction proportion is relatively small.

3. Specific criteria for revenue recognition of the Engineering Company

(1) Debugging projects: When the debugging is successful, obtain the confirmation of successful debugging, and confirm the income according to the contract;

(2) Operation and maintenance and management projects: Temporarily estimate and confirm the income every month according to the attendance time and labor service price of attendance staff, and adjust the temporarily estimated income after obtaining the monthly settlement statement sealed and signed by suppliers, the confirmation of progress, and the attendance form.

(26) Contract costs

Contract costs are divided into contract performance costs and contract acquisition costs.

The cost incurred by the Company to perform the contract is recognized as an asset as the contract performance cost when meeting the following conditions:

1. The cost is directly related to a current or expected contract.
2. The cost increases the Company's future resources for fulfilling contract performance obligations.
3. The cost is expected to be recovered.

The incremental cost incurred by the Company for obtaining the contract is expected to be recovered, and it is recognized as an asset as the cost of obtaining the contract.

Assets related to contract costs are amortized on the same basis as the revenue of goods or services related to the asset; however, if the amortization period of contract acquisition costs does not exceed one year, the Company will include them in the current profits and losses when they occur.

If the book value of assets related to contract costs is higher than the difference between the following two items, the Company will make provisions for impairment for the excess part and recognize it as an asset impairment loss:

1. The remaining consideration expected to be obtained due to the transfer of goods or services related to the asset;
2. Costs estimated to incur for the transfer of the related goods or services.

If the aforementioned asset impairment provision is subsequently reversed, the book value of the asset after reversal shall not exceed the book value of the asset on the date of reversal under the assumption that no impairment provision is made.

(27) Government subsidy

Government subsidy refers to the monetary asset and non-monetary asset that the Company obtains from the government free of charge, excluding the capital that the government invests as an investor and enjoys the corresponding owner's equity. Government subsidies are divided into the asset-related government subsidy and the

income-related government subsidy.

If the government subsidy is a monetary asset, it shall be measured according to the received or receivable amount. If the government subsidy is a non-monetary asset, it shall be measured at fair value. If the fair value cannot be obtained reliably, it shall be measured according to the nominal amount. Government subsidy measured by nominal amount is directly included in the current profits and losses.

The government subsidy related to the assets is recognized as deferred income and is recorded into the current profits and losses or the book value of the relevant assets in a reasonable and systematic manner within the useful life of the relevant assets. Revenue-related government grants are used to compensate for the related costs or losses incurred during the subsequent period and are recognized as deferred income and are recognized in the current profit or loss or related expenses during the period of recognition of the relevant cost expense or loss; Incurred costs or losses incurred, directly included in the current profits and losses or offset the relevant costs.

For the government subsidy containing both asset-related parts and income-related parts at the same time, distinguish the different parts and make the accounting treatment, classify the parts which are difficult to be distinguished as the income-related government subsidy.

The government subsidy related to the Company's daily activities is included in other incomes or offsets related costs in accordance with the essence of economic business; while the government subsidy unrelated to the Company's daily activities is included in non-operating income and expenditure.

When the recognized government subsidy needs to be refunded or has balance of related deferred income, offset the book balance of related deferred income, and include the excess parts in the current profits and losses or (the asset-related government subsidy for offsetting the book value of underlying assets in initial recognition) adjust the book value of assets; directly include these belong to other situations in the current profits and losses.

(28) Deferred income tax asset/ deferred income tax liability

1. Current income tax

On balance sheet date, current income tax liability (or asset) formed during and before current period will be measured as amount of income tax payable (or repayable) as specified by tax law. The taxable income for calculating the current income tax expenses is based on the pre-tax accounting profit of the current year after adjustment according to relevant regulations of taxation.

2. Deferred income tax asset & deferred income tax liability

For balance of book value of some asset/liability item and its tax base, or temporary difference derived from balance of book value and tax base of the item, which is not confirmed as asset or liability but tax base can be fixed as specified by tax law, deferred income tax asset & deferred income tax liability will be confirmed in balance sheet liability approach.

Deferred income tax liabilities are not recognized for taxable temporary differences related to: the initial

recognition of goodwill; and the initial recognition of an asset or liability in a transaction which is neither a business combination nor affects accounting profit or taxable profit (or deductible loss) at the time of the transaction. In addition, the Group recognizes the corresponding deferred income tax liability for taxable temporary differences associated with investments in subsidiaries, associates and joint ventures, except when both of the following conditions are satisfied: the Company able to control the timing of the reversal of the temporary difference; and it is probable that the temporary difference will not reverse in the foreseeable future.

Deferred income tax assets are not recognized for deductible temporary differences related to the initial recognition of an asset or liability in a transaction which is neither a business combination nor affects accounting profit or taxable profit (or deductible loss) at the time of the transaction. In addition, the Group recognizes the corresponding deferred income tax asset for deductible temporary differences associated with investments in subsidiaries, associates and joint ventures to the extent that it is probable that taxable profits will be available against which the deductible temporary differences can be utilized, except when both of the following conditions are satisfied: it is not probable that the temporary difference will reverse in the foreseeable future; and it is not probable that taxable profits will be available in the future, against which the temporary difference can be utilized.

For deductible loss and taxation decrease which can be carried over to following fiscal year, relevant deferred income tax asset may be confirmed subject to amount of taxable income which is likely to be acquired to deduct deductible loss and taxation decrease in the future.

On balance sheet day, those deferred income tax assets and income tax liabilities, according to the tax law, calculation will be on tax rate applicable to retrieving period of assets or clearing of liabilities.

On balance sheet day, verification will be performed on the book value of differed income tax assets. If it is not possible to obtain enough taxable income to neutralize the benefit of differed income tax assets, then the book value of the differed income tax assets shall be reduced. Whenever obtaining of taxable income became possible, the reduced amount shall be restored.

3. Income tax expenses

Income tax expense includes current income tax and deferred income tax.

Current deferred income tax and deferred income tax expenses or income shall reckoned into current gains/losses other than those current income tax and deferred income tax with transactions and events concerned, that reckoned into shareholder's equity directly while recognized as other comprehensive income; and the book value of the goodwill adjusted for deferred income tax arising from enterprise combination.

4. Offset of income tax

When the Group has a legal right to settle on a net basis and intends either to settle on a net basis or to realize the assets and settle the liabilities simultaneously, current tax assets and current tax liabilities are offset and presented on a net basis.

When the Group has a legal right to settle current tax assets and liabilities on a net basis, and deferred tax assets and deferred tax liabilities relate to income taxes levied by the same taxation authority on either the same taxable entity or different taxable entities which intend either to settle current tax assets and liabilities on a net basis or to realize the assets and liabilities simultaneously, in each future period in which significant amounts of deferred tax assets or liabilities are expected to be reversed, deferred tax assets and deferred tax liabilities are offset and presented on a net basis.

(29) Leasing

Finance lease is to virtually transfer all risks and rewards related to ownership of asset, the ownership is may transfer ultimately or not. Leases other than finance lease are operating leases.

1. Lease business with the Company as the rentee

The rental is reckoned into the relevant assets cost or the current loss/gain in the straight-line method. The initial direct expenses are reckoned into the current gain/loss, or the actual rental into the current loss/gain.

2. Lease business with the Company as the renter

The rental is reckoned into the relevant assets cost or the current loss/gain in the linear way. The initial direct substantive expenses are capitalized and reckoned into the current gain/loss, or the actual rental into the current loss/gain. The initial direct small expenses are reckoned into the current actual gain/loss, or the actual rental into the current loss/gain.

3. Financing lease business with the Group recorded as lessee

On the beginning date of the lease, the entry value of leased asset shall be at the lower of the fair value of the leased asset and the present value of minimum lease payment at the beginning date of the lease. Minimum lease payment shall be the entry value of long-term accounts payable, with difference recognized as unrecognized financing expenses. In addition, initial direct costs attributable to leased items incurred during the process of lease negotiation and signing of lease agreement shall be included in the value of leased assets. The balance of minimum lease payment after deducting unrecognized financing expenses shall be accounted for long-term liability and long-term liability due within one year.

Unrecognized financing expenses shall be recognized as financing expenses for the current period using effective interest method during the leasing period. Contingent rent shall be included in profit or loss for the current period at the time it incurred.

4. Financing lease business with the Group recorded as lessor

On the beginning date of the lease, the entry value of lease receivable shall be the aggregate of minimum lease receivable and initial direct costs at the beginning date of the lease. The unsecured balance shall be recorded. The aggregate of minimum lease receivable, initial direct costs and unsecured balance and the different between their present value shall be recognized as unrealized financing income. The balance of lease receivable after deducting unrecognized financing income shall be accounted for long-term debt and long-term debt due within one year.

Unrecognized financing income shall be recognized as financing income for the current period using effective interest method during the leasing period. Contingent rent shall be included in profit or loss for the current period

(30) Other major accounting policies and estimations

The discontinued operation refers to the component that meets one of following conditions and has been disposed

by the Company or classified as held-for-sale and can be individually distinguished when operating and preparing the financial statements: 1- the component represents an independent main Business or a major operating area; 2- the component is a parts that intends to dispose or arrange an independent main business or a major operating area; 3- the component is a subsidiary obtained only for re-sale.

(31) Changes of major accounting policy and accounting estimation

1. Change of major accounting policies

The *Accounting Standards for Business Enterprises No. 14 - Revenue* was revised by Ministry of Finance in 2017. In accordance with the Revised Standard, the cumulative impact of the first implementation of the standard is adjusted for the amount of retained earnings and other related items in the financial statements at the beginning of the first implementation period (January 1, 2020), and no adjustment is made to the comparable period information. Main influence while exercising the above provision are as:

Content / causes for the changes of accounting policies	Approval procedures	Note
The Company implemented the <i>Accounting Standards for Business Enterprises No. 14 - Revenue</i> revised by Ministry of Finance in 2017 since 1 Jan. 2020	Deliberated and approved by 6 th session of 8 th BOD	No significant influence

2. Change of accounting estimation

No change of accounting estimation occurred in the reporting period

(32)Major accounting judgment and estimation

When using the accounting policies, the Company needs to made judgment, estimation and assumption for carrying value of certain items which cannot be measured adequately due to inherent uncertainty of economic activities. Such judgment, estimation and assumption are based on historical experiences of the Group's management, together with consideration of other relevant factors. These judgments, estimations and assumption would affect the reported amount of income, expense, asset and liability and disclosure of contingent liabilities on balance sheet date. However, actual results resulting from the uncertainty of these estimates may differ from the current estimation made by management of the Company, which would in turn lead to material adjustments to the carrying value of assets or liabilities which will be affected in future.

The Group conducts regular re-review on the aforesaid judgment, estimation and assumption on a continued operation basis. If the change of accounting estimation only affect current period, the affected amount is recognized in the period when change occurs. If the change affects current and future periods both, the affected amount is recognized in the period when change occurs and future periods.

On balance sheet date, major aspects in the statement need to judge, estimate and consumption by the Company are as:

1.Fixed assets are provided for depreciation by output method

The Group recognizes depreciation for unit electricity based on values of power generation machine sets, projected power sales volume and projected net remaining value, and provides for depreciation according to depreciation of

unit electricity and actual power sales volume. Taking into account the prevailing industry policies, technologies, consumption, allocation method of power management authorities and past experiences, and the Group management believes that it is adequate for utilization life of such power generation machine sets, projected power sales volume, projected net remaining value and provision method for depreciation. If the future actual power sales volume differs substantially from the projected one, the Group would make adjustment to unit electricity depreciation, which would bring affects to the depreciation expenses included in profit and loss for the current and future periods.

2.Provision for bad debts

The Group use allowance method to state bad debt losses according to the accounting policies of accounts receivable. Impairment of receivables is based on the assessment of the collectibility of accounts receivable. Identification of impairment of receivables requires management judgments and estimates. The differences between actual results and the original estimate will affect the book value of accounts receivable as well as the recognition or reversal of provision for bad debts in the period in which the estimate is changed.

3.Allowance for inventories

Under the accounting policies of inventories and by measuring at the lower of cost and net realizable value, the Group makes allowance for inventories that have costs higher than net realizable value or become obsolete and slow moving. Write-down of inventories to their net realizable values is based on the salability of the evaluated inventory and their net realizable values. Identification of inventories requires management to make judgments and estimates on the basis of obtaining conclusive evidence, and considering the purpose of holding inventory and the events after balance sheet date. The differences between actual results and the original estimate will affect the book value of inventories as well as the recognition or reversal of provision for inventories in the period in which the estimate is changed.

4. Impairment provision for long-term assets

The Company makes judgment on each balance sheet date on whether there is indication of impairment in respect of non-current assets other than financial assets. Intangible assets with indefinite useful life shall also be further tested for impairment when there is indication of impairment, in addition to the annual impairment test. Other non-current assets other than financial assets would be test for impairment when there is indication showing its carrying value in not likely to be recovered.

Impairment exists when carrying value of asset or assets group is higher than recoverable amount, namely the higher of fair value less disposal cost and present value of expected future cash flow.

The calculation of the fair value less costs of disposal is based on available data from binding sales transactions in an arm's length transaction of similar assets or observable market prices less incremental costs for disposing of the asset.

In assessing value in use, significant judgments are exercised over the asset's production, selling price, related operating expenses and discount rate to calculate the present value. All relevant materials which can be obtained are used for estimation of the recoverable amount, including the estimation of the production, selling price and related operating expenses based on reasonable and supportable assumptions.

The Group determines whether goodwill is impaired at least on an annual basis. This requires an estimation of the value in use of the cash-generating units to which the goodwill is allocated. Estimating the value in use requires the Group to make an estimate of the expected future cash flows from the cash-generating units and also to choose a suitable discount rate in order to calculate the present value of those cash flows.

5. Depreciation and amortization

Assets such as investment real estate and intangible assets are depreciated and amortized over their useful lives under straight line method after taking into account residual value. The estimated useful lives of the assets are regularly reviewed to determine the depreciation and amortization costs charged in each reporting period. The useful lives of the assets are determined based on historical experience of similar assets and the estimated technical changes. If there have been significant changes in the factors used to determine the depreciation or amortization, the rate of depreciation or amortization is revised prospectively.

6. Deferred income tax assets

Deferred tax assets are recognized for all unused tax losses to the extent that it is probable that taxable profit will be available against which the losses can be utilized. Significant management judgment is required to determine the amount of deferred income tax assets that can be recognized, based upon the likely timing and level of future taxable profits together with future tax planning strategies.

7. Accrual liability

Provision for product quality guarantee, estimated onerous contracts, and delay delivery penalties shall be recognized in terms of contract, current knowledge and historical experience. If the contingent event has formed a practical obligation which probably results in outflow of economic benefits from the Group, a projected liability shall be recognized on the basis of the best estimate of the expenditures to settle relevant practical obligation. Recognition and measurement of the accrual liability significantly rely on the management's judgments in consideration of the assessment of relevant risks, uncertainties, time value of money and other factors related to the contingent events.

In addition, the Company would accrual liability for after-sale quality maintenance commitment provided to customers in respect of goods sold, maintained and reconstructed by the Company. Recent maintenance experience of the Company has been considered when projecting liabilities, while the recent maintenance experience may not reflect the future maintenance. Any increase or decrease of this provision may affect profit or loss for future years.

IV. Taxes

(1) Main taxation and rates

Taxation items	Taxation basis	Tax rate
VAT	Calculate the output tax based on the sales of goods and taxable service income calculated according to the tax law, after deducting the input tax allowable for deduction in the current period, the difference is the VAT payable.	6%, 9%, 10%, 11%, 13%, 16%

Taxation items	Taxation basis	Tax rate
City maintenance tax	According to the actual payment of VAT and consumption tax	5%, 7%
Education surtax	According to the actual payment of VAT and consumption tax	3%
Local education surtax	According to the actual payment of VAT and consumption tax	2%
Enterprise income tax	According to the taxable income amount	16.5%, 17%, 25%, 15%
Land-use tax of town	2 Yuan ~ 8Yuan per square meter of the actual occupied are for the industrial land located in Nanshan District, Shenzhen City; 1Yuan per square meter of the actual occupied are for the industrial land located in Zhongshan City	
Land VAT	Tax by the Value-added amount from transferring state-owned land use right, landing construction and its affiliates with four super-rate progressive tax rate

(22) Accrual liability

Item	Book balance	Year-end balance of last year	Reason
Guarantee offering outside	26,646,056.28	26,646,056.28	
Total	26,646,056.28	26,646,056.28	

Note: On 29 November 2013, Shenzhen Server and Jiahua Building Products (Shenzhen) Co., Ltd. (Jiahua Building) signed a supplementary term aiming at equity transfer over equity attribution and division of Yapojiao Dock, which belongs to Shenzhen Server, Huidong Server, and Huidong Nianshan Town Government as well as its subordinate Nianshan Group. In order to solve this remaining historic problem, Shenzhen Server saved RMB 12,500,000.00 in condominium deposit account as guarantee. In addition, Server pledged its 20% of equity holding from Huidong Server to Jiahua Architecture with pledge duration of 2 years. The amount of collateral on loans could not exceed RMB 15,000,000.00. Relevant losses with the event concerned predicted amounting to RMB 27,500,000.00 by the Group. The costs for lawyers from 2014 to June 2020 and the costs for problem left over by history amounting to 853,943.72 Yuan, ending balance amounted as 26,646,056.28 Yuan.

(23) Deferred income

Item	Year-end balance of last year	Current increased	Current decreased	Ending Balance	Reasons
Government subsidy	108,507,683.52		11,549,926.48	96,957,757.04	

Items with government subsidy involved:

VIII. Risks relating to financial instruments

The Company's main financial instruments include equity investment, borrowings, accounts receivable, accounts payable, etc., see details of each financial instrument in related items of this annotation V. The risks associated with these financial instruments and the risk management policies adopted by the Company to reduce these risks are described as below. The management of the Company manages and monitors these risk exposures to ensure that the above risks are controlled within the limit range.

The Company uses the sensitivity analysis technique to analyze the possible impact of the risk variable on the current profit and loss or the shareholders' equity. Since any risk variable rarely changes in isolation, and the correlation existing among the variables shall have a significant effect on the final amount of changes about a certain risk variable, therefore, the following proceeds by assuming that the change in each variable is independent.

The objective of the Company's risk management is to gain a proper balance between risks and profits, minimize the negative impact of risks on the Company's operating results, and maximize the benefits of shareholders and other equity investors. Based on the risk management objective, the basic strategy of the Company's risk

management is to identify and analyze the risks faced by the Company, establish appropriate bottom line to bear the risks and carry out risk management, and timely and reliably supervise the risks so as to control the risks within the limit range.

(I) Credit risk

On 30 June 2020, the maximum credit risk exposure that could cause financial loss to the Company is mainly due to the failure of the other party to fulfill the obligations, resulting in losses to the Company's financial assets, including:

Carrying value of financial assets recognized in consolidated balance sheet. As for financial instrument at fair value, carrying value reflects its risk exposure, while not the largest risk exposure. The largest risk exposure will vary as fair value changes in future.

In order to bring down credit risk, the Company establishes a special working team to take charge of determining credit limit, making credit approval and implementing other monitor procedures to ensure necessary measures are adopted to collect overdue debts. In addition, recovery of each single account receivable is reviewed on each balance sheet date to ensure adequate bad debt provision is made for unrecoverable amount. Therefore, management believes that the Company has substantially reduced the credit risks it assumes.

Our current capital is deposited with highly-rated banks, thus credit risk arising from current capital is relatively low.

(II) Market risk

Market risks of financial instruments refers to the risks that the fair value or future cash flow of such financial instruments will fluctuate due to the changes in market prices, including FX risks, interest rate risks and other price risks.

1. Interest rate risk

The Company's cash flow change risk of financial instruments arising from interest rate change is mainly related to the floating interest rate bank loans (see details in Note V (16);

Interest rate risk sensitivity analysis:

The interest rate risk sensitivity analysis is based on the following assumptions:

Changes in market interest rates affect the interest income or expense of financial instruments with variable interest rate; For financial instruments with fixed rate by fair value measurement, the changes in market interest rates only affect their interest income or expense; For derivative financial instruments designated as hedging instruments, the changes in market interest rates affect their fair value, and all interest rate hedging prediction is highly effective; Calculate the changes in fair value of derivative financial instruments and other financial assets and liabilities by using the cash flow discount method at the market interest rate at the balance sheet date.

On the basis of above assumptions, in case that other variables keep unchanged, the pre-tax effect of possible reasonable changes in interest rates on current profits and losses and shareholders' equity is as follows:

Rate changes	Current year		Last year	
	Impact on profit	Impact on shareholders' equity	Impact on profit	Impact on shareholders' equity
5% increased	878,221.61	800,563.02	1,177,083.56	1,139,067.58

Rate changes	Current year		Last year	
	Impact on profit	Impact on shareholders' equity	Impact on profit	Impact on shareholders' equity
5% decreased	-878,221.61	-800,563.02	-1,177,083.56	-1,139,067.58

2. FX risks

Foreign exchange risk refers to the risk of losses due to exchange rate changes. The Company's foreign exchange risk is mainly related to the US dollar. On 30 June 2020, except for the balance of foreign currency monetary items of 42. Foreign currency monetary in Note V, the assets and liabilities of the Company are RMB balance. The foreign exchange risk arising from the assets and liabilities of such foreign currency balances may have an impact on the Company's operating results.

(III) Liquidity risk

In managing the liquidity risk, the Company keeps the cash and cash equivalents that the management considers to be sufficient and supervise them so as to meet the Company's operating needs and reduce the impact of fluctuations in cash flows. The Company's management monitors the use of bank loans and ensures to comply with the loan agreement.

The Company uses bank loans as the main source of funds.

IX. Related party and related party transactions

(1) Parent company of the Group

Share holding proportion of any shareholder of the Company didn't reach 50%, and couldn't form a holding relationship of the Company through any methods. The Company has no parent company.

XII. Events Occurring after the Balance Sheet Date

On March 5 and March 23, 2020, the Eleventh Extraordinary Meeting of the Company's Eighth Board of Directors and the 2020 First Extraordinary General Meeting of Shareholders under the name of Shenzhen Nanshan Power Co., Ltd (hereinafter referred to as the Company) respectively reviewed and approved the Proposal on the Agreement to Transfer 70% Equity of Shen Nan Dian (Dongguan) Weimei Electric Power Co., Ltd.", agreeing to transfer 70% equity of Shen Nan Dian Dongguan Company directly and indirectly held by the company to Shenzhen Gas Group Co., Ltd. (hereinafter referred to as Shenzhen Gas) at a total price of 104.98 million yuan. According to the equity transfer agreement signed between the company and Shenzhen Gas, after the company

received 40% of equity transfer fund, i.e. 59.99 million yuan, of Shen Nan Dian Dongguan Company from Shenzhen Gas, Shen Nan Dian Dongguan Company has completed the industrial and commercial change registration on April 9, 2020. Since then, the total loan of 300 million yuan applied by Shen Nan Dian Dongguan Company from Bank of Ningbo Shenzhen Branch and Industrial Bank Shenzhen Branch has been repaid, and the joint guarantee and liability guarantee provided by the company for the above loan of Shen Nan Dian Dongguan Company has been lifted; Shen Nan Dian Dongguan Company has fully repaid the principal and interest of the company's 180 million yuan of financial assistance.

On July 2, 2020, the company's wholly-owned subsidiary Hong Kong Syndisome Co., Ltd. received the remaining 30% equity transfer payment of 44.99 million yuan from Shenzhen Gas. So far, the company has received all the equity transfer payments paid by Shenzhen Gas, and the transfer of 70% equity of Shen Nan Dian Dongguan Company was completed.

XIII. Other important events

(1) Segment information

1. Determining basis and accounting policies of reportable segments

According to the Group's internal organization structure, management requirements and internal reporting system, the Group's business is divided into three operating segments including power and heat supply, fuel oil trade and other business, the Group's management periodically evaluates the operating results of these segments so as to determine the allocation of resources and assess their performances.

Segmental reporting information is disclosed in accordance with the accounting policies and measurement standards adopted by each segment for reporting to the management, the measurement basis keep pace with the accounting and measurement basis used for preparing financial statements.

2. Financial information of the reportable segment

Item	Power supply & heating	Fuel trading	Other	Fuel trading	Total

XIV. Note to main items of financial statements of the Company

(1) Account receivable

1. Age analysis

Account age	Book balance	Year-end balance of last year
-------------	--------------	-------------------------------

Account age	Book balance	Year-end balance of last year
Within one year	61,626,629.43	31,821,804.69
1 to 2 years		
2 to 3 years		
Over 3 years	2,889.00	2,889.00
Subtotal	61,629,518.43	31,824,693.69
Less: Bad debt provision		
Total	61,629,518.43	31,824,693.69

2. According to accrual method for bad debts

Category	Book balance				
	Book balance		Bad debt provision		Book value
	Amount	Proportion (%)	Amount	Accrual proportion (%)	
With single provision for bad debts					
With bad debt provision accrual based on similar credit risk characteristics of a portfolio	61,629,518.43	100.00			61,629,518.43
Total	61,629,518.43	100.00			61,629,518.43

Category	Year-end balance of last year				Book value
	Book balance		Bad debt provision		
	Amount	Proportion (%)	Amount	Accrual proportion (%)	
With single provision for					

Category	Year-end balance of last year				Book value
	Book balance		Bad debt provision		
	Amount	Proportion (%)	Amount	Accrual proportion (%)	
bad debts					
With bad debt provision accrual based on similar credit risk characteristics of a portfolio	31,824,693.69	100			31,824,693.69
Total	31,824,693.69	100			31,824,693.69

3. No account receivable with single provision for bad debts

Provision for bad debts by portfolio:

Provision by portfolio:

Name	Book balance		
	Account receivable	Bad debt provision	Accrual proportion (%)
With minor credit risk	61,629,518.43		

Recognition standards and specifications on provisions by portfolio:

The account receivable with provision for bad debts by portfolio mainly refers to the amount from Shenzhen Power Supply Bureau Co., Ltd etc., which has minor credit risk and no provision for bad debts.

4. No provision for bad debts in the current period

5. Top 5 receivables at ending balance by arrears party

Total period-end balance of top five receivables by arrears party amounting to 61,629,518.43 Yuan, takes 100 percent of the total account receivable at period-end, bad debt provision accrual correspondingly at period-end amounting as 0 Yuan

6. No accounts receivable terminated recognition due to transfer of financial assets at the period

(2) Other account receivable

Item	Ending Balance	Last year-end balance
Interest receivable		
Dividend receivable		

Item	Ending Balance	Last year-end balance
Other account receivable	660,835,522.34	873,861,071.55
Total	660,835,522.34	873,861,071.55

1. Other account receivable

(1) Disclosure by age

Account age	Ending Balance	Last year-end balance
Within one year	181,599,583.37	239,265,595.88
1 to 2 years	262,147,773.68	89,264,291.59
2 to 3 years	136,709,590.00	100,729,690.00
Over 3 years	107,708,218.73	471,931,137.52
Subtotal	688,165,165.78	901,190,714.99
Less: Bad debt provision	27,329,643.44	27,329,643.44
Total	660,835,522.34	873,861,071.55

(2) Disclosure by category

Category	Book balance				
	Book balance		Bad debt provision		Book value
	Amount	Proportion (%)	Amount	Accrual proportion (%)	
With single provision for bad debts	28,023,159.22	4.07	27,329,643.44	97.53	693,515.78
With bad debt provision accrual based on similar credit risk characteristics of a portfolio	660,142,006.56	95.93			660,142,006.56
Total	688,165,165.78	100.00	27,329,643.44	3.97	660,835,522.34
Category	Year-end balance of last year				

	Book balance		Bad debt provision		Book value
	Amount	Proportion (%)	Amount	Accrual proportion (%)
